

Baswa Vinaya Sangeeta Lahari

Student ID: 2024169782

Course: Web Application Frameworks

Department: GSCSE

University: GITAM Deemed University

About Me

I'm Baswa Vinaya Sangeeta Lahari, a third-year B.Tech Computer Science student at GITAM University, Visakhapatnam I'm passionate about AI engineering, with a particular focus on applying it to Earth observation and remote sensing. Right now, I'm interning at FlyRank AI on the Backend AI Engineering track, and I serve as Secretary of the GITAM Aero Astro Club, where I get to engage with a community of space and tech enthusiasts. My career goal is to become an ISRO Scientist/Engineer through the GATE CS route, while also building strong full-stack AI engineering skills that could open doors to global tech companies. Beyond academics, I enjoy exploring geospatial technology, participating in hackathons and mapathons, attending developer meetups, and building end-to-end AI projects from scratch. In free time, I paint, read and dance!

Profile Photo

Educational Qualifications

Qualification	Institution	Year	Percentage/CGPA
SSC	Ramanath Secondary School	2021-2022	90%
Intermediate/Diploma	FIITJEE Junior College	2022-2024	95.7%
B.Tech	GITAM Deemed Univeristy	2024-2028 (Present)	9.57

Technical Skills

- Nextjs
- React
- Tailwind CSS
- SQL

Programming Languages

- Python
- C
- Java

5th Semester Academic Subjects

- Computer Networks
 - Covers network architecture, protocols (TCP/IP, HTTP, DNS), the OSI model, routing, switching, and network security fundamentals, with lab sessions involving hands-on configuration, packet analysis, and tools like ipconfig and arp.
- Advanced Data Structures
 - Builds on core data structures with advanced topics such as balanced trees (AVL, Red-Black), heaps, hashing, graph algorithms, and amortized analysis, focusing on efficient design for complex, real-world computational problems.
- Software Engineering
 - Introduces the software development lifecycle, requirements engineering, system design, SRS documentation, testing methodologies, and project management practices used to build reliable, maintainable software systems.
- Web Application Frameworks
 - Explores modern web frameworks for building full-stack applications, covering front-end and back-end architecture, RESTful API design, database integration, and deployment practices for scalable web apps.
- Machine Learning Techniques
 - Covers supervised and unsupervised learning algorithms, model evaluation, feature engineering, and practical implementation of ML pipelines using real-world datasets.
- Remote Sensing and Geographic Information Systems
 - Introduces satellite imagery analysis, spatial data processing, GIS tools, and geospatial modeling techniques, with applications in Earth observation and environmental monitoring.

Projects

Cliero AI - AI Powered Full Stack Application

Cliero AI is a full-stack AI-powered study companion designed to help students learn more effectively through intelligent, personalized interactions. Built entirely from scratch using Next.js, TypeScript, and Supabase for the backend infrastructure, the platform integrates Google's Gemini API to power its core AI capabilities — enabling features like conversational learning support, content generation, and adaptive study assistance. The application is deployed on Vercel, ensuring fast, reliable performance for end users.

Technologies Used: Next.js, React, Typescript, Gemini API, Tailwind CSS

More to come

Achievements

- Certifications: AICTE 2026 IBM SkillsBuild (PS35 – Multi-Class Classification on PMGSY District Data using IBM Watson Studio)
- Internships: FlyRank AI – Backend AI Engineering Intern (2026); UI/UX Intern at BBBuilds; Intel Unnati Industrial Training – Multi-Agent Systems
- Leadership: Secretary, GITAM Aero Astro Club (GAAC)
- SheFi Season 17 Scholar
